

Parts for Boom Lifts

Boom Lift Parts - Boom lifts are equipment that has a platform that may be lowered or lifted to various heights, therefore making this piece of equipment an important requirement in a wide range of professions. Accessible in several specialized kinds such as aerial hoists, scissor lifts, and knuckle boom lifts, each type operates very specifically.

The regular aerial lift variation is regularly used at skiing lodges to transfer people who are not comfortable with the ski lift. Working in a manner similar to that of an elevator, snowboarders are transported up the mountain gradually, stopping at stations along the way until they reach the summit. Aerial platform lifts are also used in construction, moving personnel safely up and down the sides of multi-level construction sites.

Scissor lifts are quite often used by service businesses as the perfect method to safely permit personnel to repair and work on cables and wires attached to poles. Phone, cable and power companies have relied on the efficiency of this kind of boom lift for years.

Knuckle boom lift trucks are made to be used in coarse terrain locales where the need to be able to change direction is necessary. This type of boom is able to fit into various tight places that a scissor lift cannot. Working among multiple equipment in a manufacturing plant or in near proximity sandwiched between two walls, the knuckle boom additionally features a standard table equipped with rails for protection and employee safety.

Based on the job requirements and the nature of work to be completed will ascertain the right model of boom jack to choose. Fortunately, there is a version suitable for almost any function.
